15206 CERES AVE | FONTANA, CA 92335

## **Company Backgrounder**

*Carousel USA* (CUSA) was founded in 2004 by John Thomson out of a need to solve a personal parking challenge. The company manufactures revolving machinery specializing in commercial and residential turntables, lifts, lateral sliders, additional parking solutions and a recently launched new high-definition photo studio app for car dealers. This equipment is primarily custom-built for commercial businesses, residential customers, architects, engineers, designers, and the military. CUSA designs and builds all its products in-house at its 24,000 sq-ft headquarters in Fontana, CA. Products are shipped and transported via Carousel USA trucks and commercial carriers to customers in North America and around the world.

Carousel USA maintains approximately 45 employees, including its in-house team of mechanical and electrical engineers who are responsible for all equipment designs. The company values innovation as much as manufacturing and aims to collaborate with customers to create custom solutions for first-of-their-kind projects and builds.

Carousel USA has an ever-growing list of blue-chip customers that includes all branches of the US Military, Disney, CarMax, Barkley's Arena in Brooklyn, NY, World War II Museum in New Orleans, Penske, AAI Textron, Ford Motors, General Motors, Genesis/Hyundai, and Tesla, to name a few. Carousel USA not only builds, but also installs and services over 95% of its equipment. [www.carousel-usa.com](http://www.carousel-usa.com)
